Assistant Athletic Director Named

Horace W. Turbeville of Newberry College was named Assistant Athletic Director at Winthrop University. Turbeville has been with Newberry for 18 years and is currently the baseball coach. He will assist Garland Adams with football, and is expected to be the next athletic director.

In the spring of our existence, our lives burst forth with new meaning. (Photo by Dennis Dickerson)

Policymakers Questioned at Forum

Only 37 students showed up at last Wednesday night's forum in Dinkins Auditorium to question a panel of Dr. Charles Vail, Dean Mary T. Littlejohn, Dean Iva Gibson, Dean Richard Cummings, Student Center Director Tom Webb, Provost F.I. Brownley and Athletic Director Nield Gordon about various college policies.

The first issue opened was the beer and wine policy. Dr. Vail said, "Our position has consistently been that of the catering firm. They and they alone have the responsibility for the sale of beer and wine" at Winthrop. Vail said that without "special permits," beer and wine should not be sold in places other than Across the Street, since the license the college received for the food service was for that place. He said that the sale of beer and wine is "sensitive" because the food service's license could be revoked if they sold to persons under 18.

When asked why the college didn't let another group get a permit of its own, Vail said, "Once that begins, we will never be in a position to say no."

He said that while he was not "offering certainty," another group might be permitted to get a license to sell beer and wine on campus if they were able to pass a string of criteria. Such criteria do not exist.

Dennis Flower of Alpha Mu Omegia asked howлагitations were set for the fund-raiser the fraternity planned. Dean Cummings said that since this was the first time an organization had held this kind of fund-raiser, "there is no hard and fast rule. We will learn," he said, "by doing."

Mike Wyts of AMO said the fraternity was told there was a straight 12 barge limit, and the right was given to Epicure to pump two more kegs. Dean Cummings said he got a form with "14 kegs" on it. Pover, who submitted the form, said, "You sold 12 kegs with two extra. I sent back the form. What was I going to put down?"

The next item on the agenda was the college travel policy set January 25, 1978 which limits use of college vehicles to a 500 mile trip. Dale Donaldson said the travel policy was prior to January 25, and Cummings, who authored the current policy, replied that there had been no policy.

Littlejohn, responding to a question as to whether the athletic department has first priority on the Winthrop motor pool, said, "for scheduled practices and games only."

Questions were raised about the rationale used in refusing to allow the Ounting Club to take two college vans on their Spring Break trip to Florida, since trips over 500 miles may be authorized, if, in the administration feels that they are justified, considering the wear and tear on the vehicles and the educational experience involved, or if students are officially representing the college. Postdent Vail said, "The extent to which the college has the money to finance this sort of thing" is the crux of the issue, "It's not what we want to do," he said, "but how much money there really is.

Although he did not have figures on how much would cost per mile to cover the actual cost to the college for use of the individual vehicle, he said the thought came to 70 or 80 cents per mile for the buses.

A number of the women's golf team tackled the next issue: Intercollegiate sports. She maintained that members of the team want to compete and should be allowed to do so. When Nield Gordon replied that there had been no one going to practice, she objected, saying that the women's team had been practicing Fort Mill on Tuesdays and Thursday and the College Farm on Mondays and Wednesdays. Gordon said that he would like to see golf scholarships at Winthrop.

Karl Folkens asked, "What if the basketball and baseball teams finish in last place? Will you bump them off too?" Gordon replied, "Yes. The coach is the first to go."

When asked by another student how the baseball and football teams could use more money from pte receipts and intramurals, Turbeville said that while the college is "fortunate to acquire" Turbeville, who has been active in baseball, "we don't have it easy, either."

When asked why the college was not a member of the Southern Conference, Turbeville said that while the college is not a member of the Southern Conference, "we don't get better than single digit."

Addressing the question of lowering Oakland Avenue Vail said it was "a big debate about," since it is not even known yet whether it would be "technically feasible." Vail said that although the idea for such a project might come from Winthrop, the high-priority department would carry it out, if it was done at all.

The first item brought up under miscellaneous was Housing and the student lobby, said Vail. Dean Gordon said that 40 to 50 additional male residents were needed next year, and West Thomson would become the closest to providing the amount of space needed, since Thomson has room for 445 residents, and 330 to 340 are expected. Lee Winter homes 292, Phelps 414, Birkhard 396 and Wofford, 394. Vail also said a crew will be hired to refurbish the whole Phelps interior this summer.

Karl Folkens suggested that the college consider hiring a full-time lobbyist to Columbia to present the legislation with Winthrop's money problems. Vail said that the college, through aotive of its own, "did not get to hire anyone right now," and is being considered. He pointed out that since controversy has been popular belief, the University of South Carolina and Clemson don't get better treatment than Winthrop does. He said that Winthrop is the "only college in the state that is growing right now," and is planning to recognize it in Columbia, but"I need lots of help."

Robie Arbott asked President Vail what the enrollment would be if it was not for "the students."

In the spring of our existence, our lives burst forth with new meaning. (Photo by Dennis Dickerson)

April 3, 1978
Winthrop College, Rock Hill, S.C.

Delta Zeta and Zeta Phi Beta Sororities are working with The Red Cross this week to reach a record donation of 420 pints from Winthrop students and staff.

Engraved recognition plaques will be awarded to departments, organizations, dorms and other groups encouraging the greatest number of members to participate.

The Annual Spring Drive will be on April 5 and 6 in the Dinkins Student Center and all parked cars are being made for a doughnut eating contest on Thursday, April 6.

SAVE A LIFE. GIVE ON APRIL 5 OR 6.
Praise, Grips And A Retraction

BY RON HOUGH

There's a fellow somewhere in the U.S. who has a good idea going. It seems he has been mailing small packets to various congressmen. Some of the packets contain miniscule amounts of radioactive waste and, quite frankly, (paraphrased), "You have been exposed to radioactivity." Not too surprisingly, an outcry ensued was so small that any exposure is insignificant. But at least the guy was getting his point across.

A typical career pattern in Washington is exemplified by Danny C. Tate, President Carter's associate assistant for congressional liaison. He came to Washington in 1969 after graduating from college and began earning less than $47,500. The top aids gave up $1,000 or 11.83% of their $30,000-$36,000 salaries, while Senator Tate, earning $20,000 last year and now makes $45,000. Richard White House staff.

The authors of the proposed increase undoubtedly came from the upper end of the salary scale thus displaying the General Rule mentality. The President's Commission on Executive, Legislative, and Judicial Salaries warned last year that "we must accept the implications of the policy that the rich are worth more and untired, or, more likely, a government of those who are willing to compromise themselves with political money." This is an old rationalistic cliche which often appears after periods of scandal. The idea follows that corrupt and incompetent public servants can be bought along with the honest ones. Honest politicians, however, cost more. This method implies that corruption is a bidding war with taxpayers supporting both sides. History points to the conclusion that the price of politicians has little to do with their supply or quality. There were more than 66,000 applicants for 2,000 federal job vacancies last year.

In the U.S. more than 70% of all workers are employed in services partially or fully supported by the government. Such statistics are painfully reminiscent of the collapse of Uruguay's government in the late 1960's. At that time, Uruguay's 800,000 private workers were equally matched by 560,000 pensioners, 230,000 bureaucrats and 170,000 unemployed people. The economy was undermined by inflation which rose several hundred percent each year. Fifty per cent of Uruguayan wealth was provided and produced by the services sector. About this time a few oddballs had dared to raise the question of Uruguayization in the U.S. The idea is thought-provoking in Washington where prosperity is considered long overdue.

Cloning

Dear Editor,

In response to the point/counterpoint article in the March 27th issue of The Johnstonian, we would like to congratulate you on your interest in the current and very controversial subject of cloning. Yet, we cannot help but feel that the arguments given were written in haste and with much misunderstanding. As biology majors, it is very important to us that the students and non-scientific world of modern world policy makes understand the essentials of this controversy before they make rash decisions.

Mr. Ford was basically correct in his definition of cloning and the procedures to accomplish it, but we feel that neither he nor Mr. Hough understood this definition. First of all in 1956, Gurdon reported on the accomplishment of successful cloning in his work with frog. Briggs and King began work in 1952, therefore by no means were Hoppe and OlmENSEN...first, as soon as the dispute has been reignited by, as Hough said, the supposed cloning of a human.

Cloning entails basically the factors described in its definition. It does not, however, involve evolution, genetic engineering, or recombinant DNA as the paper would mislead students to believe.

We do not intend to give arguments either in favor of against cloning but rather to point out some rather extreme misconceptions. We thank you for your time.

Sincerely yours,

Lorraine Campbell

Fourteen Foolish Questions

BY KATHY KIRKPATRICK

1. Does Winthrop receive a proportionate amount of the state money allotted to other state universities and colleges?

2. Why is the new South Carolina Annex at York TEC rather than Winthrop?

3. Why have Winthrop males been called the best dorm on campus?

4. Is Brutus really an honorable fellow?

5. Why do banks only lend money to people who have money?

6. Where is Mabboro County and what does it have to do with cigarettes?

7. Also, is it true that Cheryl Tiegs never smoked a Virginia Slim?

8. Why has painter Lucian Freud, grandson of Sigmund Freud, had his mother sit for portraits more than 100 times?

9. Why is there something rather than nothing?

10. If you have sewn odds and ends on a table and you cut it off, what's left—an odd or an end?

11. Who IS the heavyweight boxing champion?

12. Is God an authoritarian, democratic or laissez-faire leader?

13. Why aren't more people running in executive positions?

14. Has Liza Minnelli or Dick Cavett introduced you to white rum?

Reject six of the above questions, ignore five more, and disreguard the remaining three.

Answer the rest. Be sure your answer is well-organized and contains supporting evidence. When finished return to the nearest wastebasket.
THE ABORTION QUESTION: An Impossible Question

BY BENNY CAIN

I am addressing the question of whether or not abortion is morally right. Now there is a consensus that abortion is morally wrong, and under certain circumstances, murder is absolutely immoral. It is a moral issue and justice would be mobilized by the law to protect a human being. Upon this social fact, up on this sense of justice, our laws are based.

So the abortion question is: Is abortion murder? But the essential question behind that question is: What is the basic constituent of a human being? To speak of its freedom and its right to choose between life and death makes no more sense than speaking of the freedom and choice of any biological structure of the same order, say, the fetus of a chimpanzee.

Three month human and chimpanzee fetuses have more in common than a three month human fetus and a six month human fetus. The human brain develops from the inside out, those sections of the brain which we have in common with less evolved beings develop first in the fetus. The distinctly human aspects of the brain develop last. The fetus runs through stages very much like the embryo of fish, reptiles and non-primate mammals before becoming recognizable human.

The fish stage even has gill slits, which are vestiges of not ancient fish but of ancient fish embryos. We must start looking at them for what they are. A fertilized egg is what you had for breakfast. It has more in common with a human embryo than an early hatchling. The notion "the life of an unborn child" makes about as much sense as "the aesthetics of an unpainted picture." To speak of the freedom and rights of an entity which we cannot determine is conscious, much less self-conscious, is to beg a huge question.

A fetus has no more choice about being born than it does about being aborted. If one thinks about it soberly, the statement "abortion denies the fetus' right to life" makes no more sense than "birth denies the fetus' right to an abortion." What the fetus does possess is a potentiality, the potentiality to become one of us. But what, really, is a potentiality? It is a concept, like a square root, of beauty. It is created by perception and language, it has no real existence.

If the bridge between us and the human fetus is a potentiality, we are interminable distances apart.

Next week: the anti-abortionist reply.

THE ABORTION QUESTION: Counter-point

BY BENNY CAIN

The pro-abortionists last week argued in favor of abortion without examining carefully the essential human constituent. Let us consider the main candidate, consciousness. Many would say that this distinguishes us from the beasts. They would contend that our species is the most aware of all on earth. But what is consciousness? Would you say an osprey who sees the flicker of a fish from an altitude which makes that fish invisible to the human eye and dives to catch it until we sense our own presence? You and I wouldn't; be we don't possess the perceptual mechanisms to notice the fish. If perception assumes the presence of consciousness, then we do not possess a monopoly on consciousness.

But it doesn't. Here you ever heard about the road less passed a car, that is to realize that your consciousness was absorbed in something else, thinking about the Mac or the Big Mac you are going to buy, yet you were perfectly conscious of the process of judging whether or not the passing distance ahead was safe, pulling around the car, adjusting your speed to exceed that of the other car, and maintaining lane? You could not do it and think about your Big Mac at the same time unless this complex task functioned independently of consciousness. Likewise, the osprey's task could be independent of consciousness.

So what, then, is consciousness? Julian Jaynes contends that consciousness is dependent upon language, that before our species invented the metaphor it was not consciousness. That every human or other mammal is by the metaphor can be explained by non-conscious neural processes. If you "see" this, your consciousness of "holding" it in its presence. You call that "seeing" and "holding," which are visual and tactile processes quite independent of consciousness. So you can see why we can understand consciousness involves using a metaphor. Sartre said that consciousness is a being, the nature of which is to be conscious of the void of its being. The only thing about consciousness that we can know is its object. Consciousness itself studies our grasp. We can only talk directly about what it is. If Jaynes is right, and humans have only recently in history acquired conscious knowledge, then we cannot say this is a distinct, human characteristic.

But isn't there some qualitative difference between us as a species and other primates? Some basic constituent of the species which was present before technology or speech? Is what is distinctly human about us contained in our cultural development? The fact that these are valid questions indicates that we have difficulty understanding our basic nature. It is not at all obvious.

Typically, there are two answers to this. On the first the pro-abortionists rest. On the second, the anti-abortionist denies. Neither is defensible. Both are mere assumptions upon which divergent edifices of human thought and ethics are built.

The pro-abortionist depends upon the assumption that his sense data provides the only avenue to what is real. Thus he makes comparisons between the physical structures of human and animal fetuses, making value discriminations based solely upon the degree of evolutionary development.

The anti-abortionist could maintain that this is self-deceptive. That value judgments cannot be derived merely from sense data. That, given the pro-abortionists means of perceiving reality, the value distinction between child and fetus is totally arbitrary. That, given his scheme, a fetus of adult human is no more valuable than any other blob of matter in the universe.

'COMA' Keeps The Blood Circulating

REVIEW: BY JIM GOOD

About the only people indifferent to the going-ons of this new Michael Glickson production are the medical school cadavers and the comatose patients from whence the little derives; the audience is galvanized. If you're a fan of the Hitchcockian school of suspense (the very best in most people's opinion) then you'll love to silence your way through this one.

Without the pathetic gore of the Texas Chainsaw Massacre type chop-em-up or the Sam Peckinpaw blow-em-away stylle of the demented this movie grips from the very beginning. It is the gradually coalescing awareness of a dark and horrible secret tantalizingly revealed which commands the attention of the viewer. We find ourselves devouring every small morsel of information, every tiny clue, every piece to the puzzle as our plucky protagonist (Geneviève Bujold) unravels it. We are confused when she is confused, suspicious when she is suspicious, and in constant fear for her life as if it were our own.

Without revealing too much, the situation is as follows: Bujold as a surgical resident at a large Boston hospital is shocked to find her best friend, after a routine operation, has gone comatose for no apparent reason. Her brain pattern is flat, indicating brain death, and her body is put on life support systems. After the initial grief, the good doctor begins to wonder if there is a tie-in to another such coma case. She gains illegal access to computer files which indicate an even dozen such cases in the last year.

Paranola sets in. Is it murder? If so, who? Conspiracy?

Once the stage is set, the race is on. Bujold is in almost constant motion thereafter as both the pursued and the pursuer; a frail, feminine, yet capable, intelligent and brave personality who stubbornly perseveres against hospital staffs, professional murderers, security guards and dogs in an attempt to get the goods on the whole bunch.

Sprinkled throughout the movie there is enough fascinating special effects work to interest the viewer during the (few) more slowly paced sequences. There is a particularly creepy bit of work which manages to combine both terrible special effects and high tension. It involves an Incebox full of cadavers hanging on hooks, a professional hitman and our heroine. I'll say no more.

Bujold is competently supported by a number of quality actors: Michael Douglas, Elizabeth Ashley, and Richard Widmark among them, but this remains an essentially one woman show. She plays her part with just the proper mixture of boldness and vulnerability, never allowing the audience to feel she has the situation completely in hand. Look for a lot more from this actor in future.

COMA gets four corpses.

Mini-tip of the week: A prime choice for an outstanding new movie also featuring a female protagonist goes to AN UNMARRIED WOMAN, starring Jill Clayburgh. Her best performance yet. Talk of oscar bait on this one.

Runners' Impetus

The Dinkins Short Course on Running and Fitness continues to draw a fair number of running enthusiasts. The Dinkins program, organized by Jack Farleton, has presented runners with an overview of running physiology, diet and nutrition, as well as information on proper training techniques.

The final installment of the short course will be presented Tuesday, April 11 in the Dinkins Auditorium. Coach Bob Jenkins, local high school track coach will be the feature speaker on the program. He will discuss the Runner's Psyche and will be ready to consider suggestions for forming a local runners club.

The lecture will serve as an excellent warm-up program for the Come-See-Me Run, slated for April 15.

WANTED:

Volunteers to act as pages for the Model U.N. II

April 19-22

Contact Robin Abbott At 323-3597

Or Box 5610 or sign up at the Model U.N. Office Bulletin Board

A most creative and versatile shop for counted cross stitch and macrame supplies opened Saturday, March 18. Denise Hopper and Peggy Price invite you to stop by then and any Monday through Friday from ten until six or Saturday from ten until five and see the large assortment of floss, fabric, frames, books and graphs, jute, beads, rings. Come by 1131 Mt. Gallant Road, Rock Hill or give them a call at 366-6341.
BY RON LAYNE

The five or six years that saw you leave the little “kid” behind, fell a little too late for creating around the local drive-in riding in a ’57 Chevy. You were battling chicken pox while the older kids fought the fever of the British Invasion into American rock and roll. And, though you came close, you missed out on the mud sliding, mastubation, four day music festival in Woodstock, New York, an event that rocked the older generation with its relatively peaceful atmosphere. No, all of these things are on the billboard worthy events of other generations.

Being a “Tex” teen means you missed out on the shock waves of new morality. By the time you sat still for college, cowboys were old news. Abortion has become so commonplace, your mothers are discussing its pros and cons over the bridge table. The pill? Marijuana? Gay Lib? How many yawns did those once feathery words evoke?

Think about it, have you been robbed of any true distinction?

Hardly! Maybe it’s the proverbial, “You can’t see the forest for the trees.” You are still bringing out the years that you’ll come to know as the good old days. Open your eyes to the events and people that made the news in the late teen-early twenty, years of your lives.

True Vietnam was the calling card of other ages. It was during or after your college years that the war came to an end. POW’s and MIAs were brought home and those braces lets you sported so long on your waist with that name of a Vietnamese prisoner were removed. They say it was a war without honor, but many of you honor the memory of someone who knew you well enough to get through the rice patters, never to return.

Other space exploration came of age in your formative adolescence. Many of you were into your teens when Neil Armstrong became the first man to unseat the lunar soil. You sat with eyes glued to your T.V. screen and watched the late John Kennedy’s space dreams become reality. American technology came through, not only with landing a man and an American-Soviet joint mission. It pulled the Apollo 13 crew from the brink of a space age tragedy and all those who worked down that heard the whole world sigh with relief. In the midst of all this Kennedy disintegration, you can still feel the chill on the back of your neck as the wild image of three charred bodies comes to mind.

Locked in your memory is the ill-fated mission that never re ceived an “al system failure” strategic proof that Americans are still willing to die for something they believe in.

Are you still unconfused of your generation’s true worth? There’s more.

Lett’s, that right, Lett’s. Your generation took the blue jean, a traditional youth symbol of incorporation into a more acceptable fashion. Jeans became a fashion trend unequalled by other generation’s most suits, flapper skirts, bobble socks, and mini skirts. The beloved blue denim was carried to new dimensions of importance and became a style that is distinctively ’70s. Yes, Mr. Strauss, there’s gold in them there pants.

Want more? You’ve got it! Look back through history and consider the fashion movements of feminist movements that failed or at least fell short of their desired goals. Now take a look at WBA in the ’70’s and note your own advancement of the woman’s cause. In many fields of employment today women are getting first choice at available positions. It was that generation of women who quit burning bras and started dress ing suitably, not for the creation of the inequality of the sexes.

By now you are beginning to realize that those “darn” eyes blue when “Best of My Love” plays at your sorority reunion. No one can say you missed out on musical distinction. You’ve got it.

THANKS TO YOU

Freddie’s IS GROWING

WE SINCERELY APPRECIATE
YOUR BUSINESS

Prime Roast Beef—special at only $1.59, (A $2.50 value); $1.85 with chips

Free tea with your 2-piece chicken dinner, slab potatoes, and large roll—only $1.24

Fish and Chips dinner, 1 large piece of fish & chips, slab bar (choose from over 20 selections) and roll only $1.69.

Hot Dogs—All beef loaded anyway 60 cts value only—45 cts

Tasty BBQ, Hickory smoked on a large 4½” seeded bun, Reg. 99c; this week only 89c a sandwich and a half

These specials are through Sunday.

OPENING SOON FOR BREAKFAST

Students And Administrators Attend Leadership Retreat

On January 20, thirty Winthrop College business students and two Rock Hill business owners spent a two-day period away from the confines of daily college life, the dean's office, and the student affairs division. The retreat demonstrated for the first time the feasibility of having the students and the faculty members work together to create a leadership retreat for the students.

The retreat was held over a two-day period. The participants were invited to the campus of the University of South Carolina, where they were able to participate in a variety of activities designed to help them learn about leadership and to develop their skills in this area.

The retreat was successful, and the students learned a great deal from the experience. They were able to improve their leadership skills and to become better leaders for their fellow students.

The retreat was well-planned and facilitated by Dr. Mary T. Littlejohn, dean of students, and Dr. Gary R. Kinnard, director of the Counseling Center. The students were able to participate in a variety of activities, including small group discussions, role-playing exercises, and workshops. These activities were designed to help the students learn about leadership and to develop their skills in this area.

The retreat was a success, and the students learned a great deal from the experience. They were able to improve their leadership skills and to become better leaders for their fellow students. The retreat was well-planned and facilitated by Dr. Mary T. Littlejohn, dean of students, and Dr. Gary R. Kinnard, director of the Counseling Center.

The retreat was held at the University of South Carolina, where the students were able to participate in a variety of activities designed to help them learn about leadership and to develop their skills in this area.

The retreat was successful, and the students learned a great deal from the experience. They were able to improve their leadership skills and to become better leaders for their fellow students.
In 1972 Congress ordered the Secretary of the Army to carry out a national dam safety program in the U.S. "as soon as practicable." But Congress failed to appropriate any money to follow through with this mandate, and the Army Corps of Engineers acted only once for appropriations. The Office of Management and Budget refused. It took the loss of 39 lives in a landslide in Georgia on Nov. 6, 1977, to spur this long-needed nationwide inspection of thousands of nonfederal dams.

In response to the 1972 National Dam Safety Inspection Act, the Corps spent $3 million and three years to compile an inventory of all the nonfederal dams in the U.S., categorizing them by their hazard potential—high, significant, or low. This pigswallowing was based not on how safe the dam was, but on whether it would mean loss of life and property if it failed. The Corps placed 9,000 of these individually-built and maintained nonfederal dams in the "high" hazard category, meaning "more than a few" people would die if the dam failed, accompanied by "potentially catastrophic" loss downstream. Of the 49,200 dams listed in the inventory, about 22% are as having high or significant downstream hazard potential; and about 19% had no classification.

Although the General Accounting Office called the inventory "incomplete" and "ineffective," the Corps decided to continue the inventory. The Corps placed 9,000 of these individually-built and maintained nonfederal dams in the "high" hazard category, meaning "more than a few" people would die if the dam failed, accompanied by "potentially catastrophic" loss downstream. In deciding which dams will receive priority attention, the Corps intends to phase out its participation, and the individual states are expected to phase in. If the state doesn't want to get involved, the Corps will let contracts to private firms.

In determining which dams will receive priority attention, the states are asked to submit a list of dams they think should be inspected. These may, or may not, be the same dams that the Corps considers high hazard, because some state may know of other dams they consider critical. Crisp added. Also, it should be mentioned that the Corps inventory includes only dams which hold at least 11,000 gallons of water and are at least 25 feet high. Those dams that do not meet these criteria were not listed in the Corps' inventory. There could be thousands more of these smaller dams, Crisp said.

Can states handle the inspection properly if it is turned over to them? Secretary seems to say not. Dr. Bruce A. Tschantz, a University of Tennessee Civil Engineering professor, said that half of all the states essentially have little or not effective safety control, or a third of this nation's dams. At least eight states lack adequate funding or qualified personnel to enforce existing laws and inspect safety rules and regulations. The Corps have not launched dam inspection and safety programs because of financial problems.

Good dam safety laws, adequately funded and enforced, simply are not high priorities at the Federal level. The dam disaster occurs. As one Corps of Engineers official put to Los Angeles Daily News columnist Gaylord Shaw, "The level of concern for dam safety always seems to be in direct proportion to the time since the last dam disaster." Will the current rush to inspect these nonfederal dams result in nothing but a decision that will be put on the back burner once the memory of Toccoa and other like it fades? Crisp admitted that "certainly Toccoa was a catalyst that caused the entire program to congeal," but he added that dam safety already was a big concern, and the Administration had been moving "in a progressive manner.

"Come See Me" Coming Soon

Come-See-Me Weekend is scheduled for April 14-15-16, Model United Nations is just two weeks away. Student coordinator Kari Folsom, student assistant, comrade Jody Guy, and a student Secretary have been working hard all year, and the conference promises to be a good experience. Model UN starts April 15, and the final session will be the morning of April 22; seventy countries will be represented. There will be up to 250 students from forty-five North and South Carolina high schools participating. Volunteers are still needed to serve as pages and hostesses for the banquet and to help with registration on the 19th—if you'd like to help, come to the Student Office at 125 Batten.

Video Community Workshop Offered

"Introduction to Video," a Winthrop College community workshop in basic video production will begin Monday, April 3, at 7 p.m. in Jovens Center for Continuing Education.

The workshop is designed for persons with limited knowledge of electronic media who want to acquire "hand-on" experience in video production. Instruction will be geared toward use of video as both a communications medium and an art form.

Steven Feldmar, director of media services for the Charlotte Arts and Science Council and an independent video artist, will teach the workshop. Feldman, formerly with WGBH-TV in Boston, will instruct participants in use of portable color video recording and playback equipment.

The workshop will meet Mondays and Wednesdays from 7 to 9:30 p.m. Attendees will participate in use of portable color video recording and playback equipment.

Pricing information, call 803-323-2196. For more information,
Career Opportunities For Women

In the past, women serious about their careers would have found the top positions offered to men. Now women are moving into those positions and are experiencing better advancement opportunities. The outlooks are good. Dentistry, law, business, medicine, and engineering are a woman's best bets. Jobs in education, journalism, and library science are rare, not only for women, but also for men.

The field of Dentistry is marked to be an increase in the schooling of women due to expanded federal funds. Women have been doing well in general practices and can expect to do well in the specialist field for which opportunities are even better.

Women make up 25% of those expected to receive degrees in Dentistry. They will fill the majority of openings in government and environmental law. Women can expect to benefit greatly when they combine a law degree with another discipline, thus doubling chances for salary and position.

Equal employment in management has been slow to become a reality. Any woman striving for a top management position must be aggressive. "If she is assertive, knows what she likes to do and sets her goals, a woman has excellent chances for advancement," said Eve Grover, vice-president of the State National Bank and director of the Women's Headquarters in Bethesda, Maryland. Preparation in computer science, economists, accounting and finance are encouraged.

Education, journalism, and library science are three fields where women find discouraging. One may consider Special Education as the only possibility in the area of teaching. Journalism's only possible opportunity can be found in television. As for Library Science, a Master's degree is almost essential for job placement.

In any job, a woman must plan and research her goals and opportunities. She must study thoroughly available jobs and tailor her education and skills to fit the market.

Home Ec.--A Part Of WC

When Ruth Hovermale came to Winthrop College 16 years ago, home economics was a small department.

Today, the School of Home Economics is one of five professional schools at Winthrop, enrolling nearly 500 students seeking graduate and undergraduate degrees.

The growth of that department is attributed largely to the work of Dr. Hovermale who has served as dean for the last 12 years.

Because of illness, Dean Hovermale is stepping down as head of the School of Home Economics. She will remain at Winthrop, however, and will assume part-time teaching duties in the Textiles, Clothing and Interior Design Department.

Winthrop President Charles B. Vail praised Dr. Hovermale's work. "As Winthrop's first and only dean of home economics, she has developed a program of national stature," he said.

"We were one big department until July 1976 when we were departmentalized," says Dean Hovermale. There are four departments within the School of Home Economics--Family and Child Development, Food and Nutrition, Home Economics Education, and Textiles, Clothing and Interior Design.

At one time, every woman student was required to take a course in home economics. "We maintained our enrollment after that requirement was dropped," says Dean Hovermale, "because we developed new programs and increased offerings, particularly at the graduate level."

Dean Hovermale says 10 percent of the freshman class each year indicates an interest in the same area of home economics. Since co-education in 1974 male students are enrolling in the traditional female programs. Most of the male enrollment has been in textiles, interior design and distributive education. Dean Hovermale foresees a golden opportunity for the college to expand in this area because of the region's dependence on the textile industry.

From a few faculty members, the division has grown to 21 teachers. The research program, a function of the college's land grant obligation, was expanded. The graduate program was strengthened by the establishment of four off-campus teaching centers. A six-year degree was added for advanced work in the field.

When Dr. Hovermale came to Winthrop, only one-third of Thurmond Building (home of the School of Home Economics) was being used. "Now, every single room is utilized," she says.

Within the last 10 years, the Thurmond Building has been completely remodeled. "We haven't had to enlarge for space," said Dean Hovermale, "but we've updated our equipment and remodeled all labs."

The American Home Economics Association accredited Winthrop's program in April 1974, one of the first colleges in the country to achieve accreditation. The American Dietetics Association accredited the coordinated undergraduate program in dietetics a few months later. The dietetics program is the only one in the Carolinas.

Dean Hovermale thinks the future is great for the field of home economics. "The things we've been doing for the last 100 years are just being discarded."

(Continued on page 13)
What Can You Do With An English Major?

As teaching jobs and opportunities dwindle, those who have acquired a B.A. in English begin to wonder exactly what positions they are suited for. The answer can be found in identifying strong points and then using them to the advantage.

Many English majors have the fear of being labeled as a "generalist." This general education can be a plus for the English major because she has been trained for a number of various skills. English majors are able to read and digest large masses of material, are able to summarize and lead a point. They know word interpretations and are familiar with comparison and contrast. In addition, English majors have refined organizational skills and are adept at research.

Ordinary jobs sought by English majors include teaching, writing, editing, and publishing, but the possibilities are endless. One needs to accent her capabilities and use a little imagination. "Pick out your strongest skills—the things you have done the best, and enjoyed the most," said Richard N. Bolles, author of WHAT COLOR IS YOUR PARACHUTE? English majors with a psychology or education background may find a job devising pre-testing questionnaires for educational projects, or she may become a go-between for computer programmers and the hiring businesses.

Concentrate on particular strengths. One who is skilled in the ability to present and contrast may become claim representatives or paralegal assistants. Those with an imaginative reading background may find they are able to put themselves in anyone's place and listen well. These skills can lead to jobs in sales management training, non-clinical counseling, consumer service representation, or perhaps as an interviewer for a personnel department.

One needs to start her job search early. She must remember those with a B.A. and Ph.D.'s will be competing with those with a B.M. for the same jobs. It is a smart idea to begin making connections between desired jobs and personnel background by first informing oneself of jobs in an interested field. Talk to people in that field and research material in the placement center and libraries. Secondly, obtain as much hands-on experience as possible. Work summer or part-time jobs in a particular field. Volunteer work will prove to be most beneficial. Keep a journal of the results from the working experience. Not only will it clarify what has been learned, but will aid in analyzing problems and needs. Finally, be inventive and use imagination. Try to create a job that calls for what you have to offer.

Arts And Sciences Career Night

The College of Arts and Sciences in conjunction with the Placement and Career Planning Office will present a Career Night on Wednesday, April 5 at 7:30 p.m. in Reade Auditorium. After a brief introduction by Frank Joseph of the Placement Office, students will be able to talk with representatives of several different departments. The program will be presented in a "Carousel" format where students will be able to talk with people in three different areas of Arts and Sciences. These areas include: Communications, Biology, English, Sociology, History, Mathematics, Political Science and Psychology. Students will be able to find out information about the types of occupations related to certain majors, places of employment, employment outlook, career salaries, and earning and working conditions.

Nancy Forrest and Frank Joseph are coordinating Career Night. Representatives from the departments include Dr. John E. Gargant, Dr. L. Hugh Davis, Dr. Dorothy Roberts, Dr. Charles Nollet, Dr. Charles Huff, Dr. John Heal, Dr. Howard Feder- spiel, and Dr. Roger Baumgarten.

The program will be especially helpful to upperclass students who aren't quite sure what they want to do after graduation and also to undecided students.

Arts And Sciences Career Night

April 4, Tuesday, 1978
10:00 a.m.-4:00 p.m.

- Blue Cross and Blue Shield of S.C., Columbia, S.C. will interview accounting and computer science majors for positions as Junior Field Auditors and Programming Trainees.

April 5, Wednesday, 1978
9:00 a.m.-4:00 p.m.

- Investors Disbursed Services, Charlotte, N.C. will interview any major for Sales Representatives.

April 4, Tuesday, 1978
9:00 a.m.-5:00 p.m.

- Oxford Industries, S.C., Gaffney, S.C. will interview for positions of service and distribution management trainees-entry level and production trainees-entry level.

April 5, Wednesday, 1978
9:00 a.m.-4:00 p.m.

- Baxter Travell Laboratories, Marion, N.C. will interview Chemistry majors (or minor).

April 6, Wednesday, 1978
9:00 a.m.-6:00 p.m.

- Medical University of S.C., Charleston, S.C. will interview Mathematics, Secretarial Science, Biology or Chemistry majors for positions Computer Operator, Secretarial Staff Assistants, Laboratory Technologists.

April 7, Thursday, 1978
9:00 a.m.-5:00 p.m.

- Catawba Valley Girl Scout Council, Inc., Hickory, N.C. will interview any major, any student, for summer work. No placement papers required. Any one may sign up.

April 10, Tuesday, 1978
9:00 a.m.-4:30 p.m.

- Sears, Roebuck & Co., Atlanta, Ga. will interview for positions in Retail and Credit Management Training Program.

April 4, Tuesday, 1978
10:00 a.m.-4:00 p.m.

- Blue Cross and Blue Shield of S.C., Columbia, S.C. will interview accounting and computer science majors for positions as Junior Field Auditors and Programming Trainees.

Arts And Sciences Career Night

Give Your Congressman

A Ring (Finger, That Is)

(CPS)-Lucasville, Ohio prison inmates are lopping off fingers and mailing them to select officials in Washington, D.C. The first severed digit, received last December, was immediately turned over to the FBI.

Two fingers are being posted by 14 Lucasville inmates who plan to send fingers at regular intervals unless the government allows them to renounce their U.S. citizenship. The protestors argue that the Helsinki Agreement on Human Rights gives them the legal right to renounce citizenship. The State Department disagrees.

At last word, prison vouched that two more digits will be amputated and mailed to Washington by March 31, unless their demands are met.

**Rocky Mountain High**

Saratoga Springs, N.Y.- You stand braced against the gnarled edge of the mountain top, hung perilously between heaven and earth. The wind ripples through your clothing, and far below the trees tops sway. A heavy mixture of fear and exhilaration tinges through your body.

You lean into the ropes, and, moving your feet cautiously over the rock, begin to climb. The edge of the cliff slides into the sky. In a moment you find yourself facing the sheer rock of the cliff, and with a rush of emotion, you glide down the rocks earthward.

This is but one of the many experiences provided by the ADRONDECK Institute in their summer mountain journeys. Located at Skidmore College in Saratoga Springs, New York, the Institute uses the Colorado Rockies, the Adirondack mountains, and the wilds of northern Ontario as departure points from the conventional in education by offering three-credit hour literature courses where all instruction takes place outdoors.

Participants complete their reading on their own before gathering at the field sites for ten days of field instruction - which in the mountain courses includes rock climbing, rappelling, and river fording.

The program has been so successful over the past five years that it has attracted students from over 100 colleges in 25 states. The credit earned in the Institute courses is usually transferable back to the student's home institution.

Professor Jonathan Fairbanks, creator and director of the Adirondack Institute, explains that "the program is intended to be a variation on the traditional academic courses, and is meant to supplement, not replace them."

What is different about the Institute's summer courses? "Most literature courses taught in the classroom are essentially 'intellectual exercise,'" Fairbanks explains. "This program takes literature and tests it against experience."

With excitement he recalls last summer holding a pack of coyotes yipping along a mountain ridge directly above the group's camp. All of the students were awakened as they lay in their sleeping bags listening to the wild sounds of coyotes running in the moonlight.

A former Outward Bound instructor in Colorado and in England, Fairbanks' wilderness experience ranges from climbing in the New Zealand Alps to canoeing white water in the United States and Canada. He began his university teaching career in New Zealand and taught English for seven years at the State University of New York before establishing the Adirondack Institute at Skidmore.

The Adirondack course includes writings by Hemingway, Faulkner, London, and Frost, while titles such as "Tough Day Through Paradise," "The Big Sky," and "The Comancher" sparkle the Colorado reading list. The Canadian course emphasizes exploration literature.

The groups are co-ed and are comprised of 12 students and two instructors. Dr. Anne Lathille, noted Adirondack guide and author of "Woodswoman," is among the instructors who assist Fairbanks in the field.

The program is open to all undergraduates and other interested adults, and welcomes non-credit applicants as well as those taking credit. Further information can be obtained by writing Adirondack Institute, Dana Hall, Skidmore College, Saratoga Springs, New York 12866.

---

**New Gym Regulations**

New WC Peabody Gym regulations: Sat.-Sun., the gym is reserved for WC students, WC personnel, faculty, staff, their dependents, and one guest, in their immediate presence. All persons will be required to show current Winthrop College I.D. before using the facilities. Any violation of these regulations will result in arrest and conviction for trespassing.

---

**Intramural Softball**

This year's season will prove to be the best yet, despite facility conflicts. This year's miles will follow last year's. This year there are 11 men's teams, 11 women's, and 4 co-ed. The total number of students, faculty, and staff participants will range about 390 persons.

**Softball Record 2-2**

Winthrop vs. Barlington College of Rhode Island Thursday, March 23 at Peabody Field. Winthrop College. In the first game of this double header. WC was led by the pitching of Chris Sherman, who received the victory, and the batting strength of freshman Lisa Hudson. Judy Kirkpatrick finished the first game on the mound to secure WC's 14-10 victory in game number 1.

In game number 2 Judy Kirkpatrick continued to pitch. Errors on the part of this young WC team spelled a 12-9 loss thus giving WC a split.

This team, coached by Linda Warren, is a young team, made up of freshmen transfers and a few remaining veterans.

The second double-header was against Limestone College at Gaffney. WC won the opener 12-9, once again behind the pitching of Judy Kirkpatrick and Chris Sherman. But once again the second game was lost due to the lack of experience, and too many mental errors. Coach Linda Warren is very optimistic about her young team, relying on three seniors, four juniors to give leadership to this year's team consisting of five sophomores and four freshmen.
The J.P. Stevens Campaign: A CHANCE TO GET INVOLVED

(CPS) - A resurgence of the coalition that created the social dynamism of the 1960s is forming around the growing international campaign to protest the corporate practices of the J.P. Stevens Company. Students and faculty have a chance to be evenly meaningfully involved in a struggle that will affect the lives of 45,000 workers at J.P. Stevens and will probably also have a significant impact on the whole of American society.

The mammoth Southern-based Stevens coalition has become the symbol of some of the most retrograde aspects of American corporate behavior through its policies of racial and sexual discrimination, its unsafe and unhealthy working conditions, its substandard wages and meager job benefits and above all its continuing efforts to deny workers their basic democratic right to protest and change their conditions. Its latest attempt to respond to workers' attempts to unionize, Stevens has compiled a record as the worst labor law violation in American history.

Yet even larger issues are involved in the Stevens struggle. The union organizing breakthroughs of the late 1980s led to a post-war search for political climates friendly to union-busting and continual low wages. In recent years, this has meant a growing Sunbelt industry exodus which has had a devastating effect on the social and economic structures of the North, and on the spirit of the American labor movement while it has brought a scant benefit to exploited southern workers.

The Stevens campaign is clearly the opening battle in a war which has been a far broader effort to organize the un-organized and to remove the major incentive to these run-away shops. And even beyond that, consider the impact on national policy if Southern political structures, which have been for so long a national conservative bastion, would have to answer to the kind of militant bi-racial and politically experienced labor movement that has grown within the J.P. Stevens campaign. Obviously, there is a great deal at stake.

The present more vigorous and more promising phase of the long-festering Stevens struggle is little more than a year-old. Following the merger of the embattled Textile Workers and the older Amalgamated Clothing Workers union, the new 3 million member Amalgamated Clothing and Textile Workers Union (ACTWU) has already scored major victories on the legal fronts of the Stevens campaign. An organizing presence has been established at every one of the Stevens 85 plants, and a renewed fighting spirit prevades in the mills. A strengthening of the present-stylo toothless National Labor Law Relations Act—which made it cheaper for Stevens to perpetually tie them up—and an unorganized and to remove the major incentive to these run-away shops. And even beyond that, consider the impact on national policy if Southern political structures, which have been for so long a national conservative bastion, would have to answer to the kind of militant bi-racial and politically experienced labor movement that has grown within the J.P. Stevens campaign. Obviously, there is a great deal at stake.

The present more vigorous and more promising phase of the long-festering Stevens struggle is little more than a year-old. Following the merger of the embattled Textile Workers and the older Amalgamated Clothing Workers union, the new 3 million member Amalgamated Clothing and Textile Workers Union (ACTWU) has already scored major victories on the legal fronts of the Stevens campaign. An organizing presence has been established at every one of the Stevens 85 plants, and a renewed fighting spirit prevades in the mills. A strengthening of the present

prestigious individuals and organizations have already endorsed the boycott. It is here, within the boycott campaign that the broad 60's style coalition has begun to build and it is here, by participating in boycott activities, that campus committees can most directly help the Stevens workers.

Last year saw boycott action on a number of campuses, with information work—such as teach-ins, forums, literature distributions and local press articles—beginning to have an impact. This year, with the issues much more widely known, broader campus campus backing and more pointed boycott activities have been possible as well. For example, a very successful petition drive on university buying of Stevens' products was launched at Princeton, gaining wide campus support and a lot of press attention.

During this winter recess, a number of campus boycott groups met in New York for a combined strategy session. The format of local petition campaigns around the issue of university buying of Stevens' products emasculated the most natural tactic for spring-semester activity. A petition drive with issues brought right onto campus provides for a broadly basic coalition to form around a very specific boycott activity, and if forms are designed with only a few signatures slots on a page, wide spread participation in circulation is encouraged.

One might expect Stevens to store up bigger sales statistics by dumping boycotted products at the retail level, and institutions such as hospitals and universities would be prime markets.

A campus-based boycott effort can have a significant effect on the outcome of the Stevens struggle, but the campaign must be extended to many more campuses. Students and faculty members, particularly those in major cities, are sorely needed as boycott activities for broader campaigns within their general communities. People are needed as boycott speakers, leaflets, organizers and as volunteers for the detailed office work that makes organizing happen. To get more involved or simply get more information, contact Gene Carroll, national campus coordinator, or Paul Minoff, national faculty and New York area chairman, at ACTWU Boycott Staff, 111 East 15th St., New York, N.Y. 10003 or call 212-560-4400.

Reading about the Stevens Struggle, understanding the issues and sympathizing with the cause are all necessary, but more is needed to help the Stevens workers.

ONE MORE TIME....

BY RALPH JOHNSON

He has the appearance of a southern farmer. He speaks like a minister in his often times confusing political rhetoric. William Jennings Bryan Dorn is running for governor of this state and wants everybody to know it.

Dorn, 61, is a farmer from Greenwood. When he was 23, he ran for the State Legislature from Greenwood. Not only did he receive the farmer's vote, but he also carried the textile vote and the vote of the city dwellers also. Not satisfied with the State House of Representatives, Dorn at 24 ran for the State Senate. After a controversy that centered around whether he was qualified for the Senate because of his age, he was seated.

Volunteering for the Army at the outbreak of World War II, Dorn served 19 months in the European theater. Returning home full of political ambition, Dorn announced his candidacy for the United States Congress. He won and two years later ran for the United States Senate. This venture, however, did not lead him to victory. Two years later he again ran for the U.S. Congress and was elected and served for 24 years.

Bryan Dorn at first may seem like just another southern farmer. However, underneath this seemingly unsophisticated exterior is a man skilled in political expertise and one who knows the political ropes. His platt run, although slightly politically unrealistic is very impressive. Among the things that he would like to see are:

Raising the salaries of teachers in South Carolina so that they will be competitive with the national average or at least in line with those of the states of Georgia and North Carolina.

A firm supporter of education, Dorn would like to see kindergartens in every county. More money should be appropriated for higher education, and he stated that he would definitely favor budget increases for Winthrop College.

Dorn For Governor

covered by the rest of society because of the energy crisis," she adds.

She says going back to teaching is going to be a big challenge. "Students today are better educated. That means keeping up with current literature and lifestyles to stay in tune," she said.

"You not only have to be an educator, but also an entertainer," says Dean Hovermale. "When you can't do both, some students get bored."

The Abortion Question:
(Continued from page 8)

To say that a fetus is not aware, let's abort it, is also to beg a huge question, namely, that I understand the nature of awareness, that I am sure that what constitutes humanity is present there. The pro-abortionist assumes that, without sensory input, the fetus must not be essentially human. Now let us introspect. Does any of us identify his or her essential nature with any of the senses, or all of them, on which the pro-abortionist rests on so smugly?

The world is mysterious, we live mysterious lives and are mysterious beings. All of us feel we are somehow more than our senses allow us to believe. There is at least as much probability that we are essentially spiritual creatures as there is that we possess no such essence, if one is willing to accept introspection as a means of understanding reality. But there is no way to prove either position. From the standpoint of proof, they are both assumptions floating on nothing.

So how can we abort the fetus? How can we take a chance with violating the development of another mysterious being? The difficulty of the problem is compounded by the strong social and personal pressures to rid oneself of an unwanted pregnancy. An answer is impossible.

Terminals Provide Contact With USC

Video terminals recently installed in the School of Business Administration at Winthrop College now give computer science students direct contact with the University of South Carolina's IBM 570 computer.

For the first time, Winthrop students can sit at one of two terminals, ask the computer questions and get instant feedback, according to James G. Williams, III, an assistant professor of computer science.

Before the $8,000 video terminals were installed, students had to process keypunch cards and then wait one or two hours before getting the computer's answer on a paper printout.

Under the new system, called VSPC (Virtual Storage for Personal Computing), the students utilize high-speed CRT (Cathode Ray Tube) terminals to converse directly with the USC computer, considered to be the top of the line in IBM computer hardware.

Williams says students will receive more up-to-date training experience by working with the CRT terminals. "More and more businesses are using terminals," he said. "We're just trying to prepare Winthrop students to work with the type of equipment found in the business world."

The terminals also give computer science students access to computer languages not previously available at Winthrop.

Under the new system, Williams says that an instructor can actually use the terminal hookup to teach a course.

"Some medical schools do this," says Williams. "The computer is programmed to be a patient with varying symptoms, and the medical students are asked to diagnose the illness."

Students can also be tested by the computer, using the terminals. The instructor programs the computer to give a test. The student sits at the terminal, works the problem and learns if the answer is correct. If not, the student can do it again until the computer says it's correct.

Williams says the School of Business has also ordered a micro-computer system which should add even more depth to computer training at Winthrop. The micro-computer would actually allow students to set up payroll, inventory of bookkeeping systems for businesses, but on a smaller scale than possible with a large computer.

NEW TERMINALS INSTALLED—Richard McFadden operates the new video display terminals recently installed in the School of Business Administration at Winthrop College. (Photo by Joel Nichols)

Yates In '78!

BY RALPH JOHNSON

"I am running for Congress because I'm upset with 5th district representation in Congress. The present Congressman's high absenteeism is a disgrace. Any elected official who does not represent the people should be challenged." These words by Colleen Yates, candidate for the Democratic nomination for congress in the 5th district, are her rallying cry and what she stands for.

When asked what her qualifications for the job of congresswoman were, Yates replied that her membership on the Sumter City Council has prepared her for the job. "The City Council is the closest government to the people. She feels her membership on the State Municipal Board and other governmental organs has given her the wide and varied experience needed for Congress. She feels that one thing she has found in her dealings with people is that "the people want government off their backs." The bureaucracy, she feels, hampers rather than helps the people. Things are over-regulated. Although she admits that she can offer no quick solutions to the problems of endless red tape, she does feel she can do something by protesting and fighting loyally. Yates also feels that she offers a new perspective to Congress. "I am not a lawyer and the majority of the people are not lawyers and they only see one side of an issue. I represent an entirely different viewpoint." When asked if she thinks the 5th district is ready to elect a woman as their representative, Yates replied, "The 5th district is ready to elect someone who cares about them." Yates also stated that Vice President Mondale's visit to South Carolina to attend a benefit dinner for Ken Holland "shows that the office is being taken away from the people. I resent this intrusion into a Democratic primary, and this is the first time this has ever happened."

Yates stated that in the event she lost the race, her life would not change. "However, I do have a lot to offer the people in the 5th district, and I hope that they take advantage of it."

Yates also stated that she has no further political ambitions. The job of Congresswoman would not be a stepping stone to something else. "My real ambition is to: (1) prove that a non-lawyer can get elected, (2) prove that a woman can effectively serve the district, (3) prove that a person without vested interest can get elected."

Hunger Walk Announced

The Rock Hill CROP Walk to fight world-wide hunger will take place Saturday, April 29. The ten-mile walk will raise funds for the 500 million hungry people in the world today, CROP being the primary recipient. Sponsors and walkers are needed to make the CROP walk successful. Participants and walkers must pledge any amount of money for each mile walked. Then each walker must walk or bicycle the ten-mile route. Afterwards, pledges must be collected. Volunteers are also needed to help on committees, at aid stations, and along the route's checkpoints. Interested volunteers or participants should contact the Wesley Foundation, the Westminster House, the Oratory or the Baptist Student Union.

CROP, the Community Hunger Appeal of Church World Service provides self-help in the form of emergency foods, seeds, tools and self-aid. One-fourth of the funds raised will go to Hope, Inc., which dispenses food and clothing in the Rock Hill area.

Camp ARC Seeks Volunteers

Camp ARC, a residential and day camp program for York County's mentally handicapped youngsters, is seeking volunteers for staff positions this summer.

Orientation sessions for camp staff are scheduled for June 7-9. The camp, divided into three-day sessions and two-one week residential sessions, will run from June 12 through August 11.

In addition, about 200 children attended the camp. To schedule an interview or obtain more information, call Tom Duncan at the Winthrop College Human Development Center, 325-2344.

Wilson Running For City Council

BY RALPH JOHNSON

Winthrop Political Science professor Dr. Melford Wilson announced two weeks ago his candidacy for the vacancy on the Rock Hill City Council. Wilson needs hard-working, energetic people who care where Rock Hill is going and can provide responsive leadership necessary to see that our goals are accomplished," said Wilson.

Rock Hill will grow. How it grows is important," said Wilson. "The era of growth, directed and financed out of Washington is over. We must take responsibility for our own future." Wilson stated that his service on the Rock Hill Planning Committee and the Rock Hill Zoning Board of Adjustment and Appeals has made him aware that orderly, positive growth of industry, business and population requires hard work, planning and leadership.

Leadership must be responsive. The first step to responsive government is setting the people know what is happening. Often citizens find out about city decisions after they have been made. Melford Wilson proposes the establishment of community bulletin boards located in the various malls, community centers, and senior citizens centers. Notice of all city meetings and their agendas should be displayed as well as the reports of all action taken.

The second step to responsive government is hearing from the people. Wilson proposed the establishment of a "question hour" preceding one council meeting per month. The council also should take its meetings to the people. Wilson says that even his campaign ad will seek to hear from the people.

When asked whether he felt that his academic background would be a liability or asset, he stated that it would be an asset in that his field is government. He would also propose a periodic review of departments and agencies in city government to check how they utilize funds.
Malambri Named New Director Of Bands

William F. Malambri, 83, of Gaffney has been named to fill the newly created position of director of bands at Winthrop College.

Malambri, currently in his third year as chairman of the Division of Fine Arts and director of bands at Limestone College, will take the Winthrop post July 1.

Jess T. Givens, dean of the Winthrop School of Music, said Malambri would also be an assistant professor of music. Known throughout the Carolinas as a clinician, judge and guest conductor, Malambri conducted the all-York County Band at Winthrop in January.

At Limestone, he serves as an associate professor while directing the jazz ensemble, the wind ensemble and summer band camps.

Malambri was band director at Carolina Military Academy at Maxton, N.C., from 1967 to 1969; at South Granville High at Creedmoor, N.C., from 1969 to 1972; and at Chapel Hill, N.C., city schools from 1972-1974.

Youngblood Resigns

Max Youngblood has resigned as Director of Admissions and will be replaced by Peter Capponos, Director of Financial Aid, effective May 1, 1978, according to F.Y.I., the faculty bulletin.

Youngblood taught science four years previously to coming to Winthrop where he sought his Master's Degree. He received his undergraduate degree at Endicote College in Dixie West, S.C. "When I graduated I had the choice to continue teaching or to work here at Winthrop. I decided to do something different and stayed here," he said.

"I don't work with students anymore, and I've realized how much I missed it. Teaching is something different for me," Youngblood said. "It makes you feel like you've done something for someone I'll probably be into public education for awhile."

Peter Capponos has been at Winthrop for one-and-a-half years. Before Winthrop he was Assistant Director of Financial Aid at Pratt Institute in Brooklyn, New York. "I've been in Financial Aid for fourteen years. I like what I do and am good at it," Capponos said.

"I refuse the job at first when Dr. Littlejohn asked me 'o like Max's place, but when Dr. Vail asked--well, I couldn't refuse," he said.

"I had some admission experience at Pratt and am excited about the position. I like the challenge and already have ideas to work on," he said. "I can feel Winthrop is beginning to bubble and I'm excited about it."

In 1975, he earned his master of music degree from East Carolina University where he was director of the variety band, assistant director of the jazz ensemble and an instructor of basic music skills for non-music majors.

A 1968 graduate of Palmetto, N.C., High School, Malambri earned his undergraduate degree in music education at Pembroke State University.

As an undergraduate, he was a member of the Pembroke marching band, the symphonic band, the jazz ensemble and the chorus. At East Carolina, he played first trumpet with the wind ensemble and the jazz ensemble.

Malambri has performed with:

- Mango smuggling is dangerous
- Tourists returning from abroad who bring in mangoes illegally, as an odd souvenir from a summer vacation, can cause more harm than they probably realize.
- Mangoes can carry plant pests or animal diseases that could severely damage American crops, forests and livestock. -- CNS

Room Service, Please

The Union Hotel, Saratoga, New York, was the first hotel built in America. It was constructed in 1802 by Gideon Putnam.

Nutrition Seminar Offered

A cooking and nutrition seminar for day care and preschool personnel will be held at Winthrop College Thursday, April 6 from 7-9 p.m.

Sponsored by the School of Home Economics and Joyce Center for Continuing Education, the session will cover basic cooking and nutrition concepts for persons working with children.
Everyone says that your college years are the best years of your life. That may be so, but they're sure not the richest. And that's where McDonald's can help. We've got enough good, hot food to keep you going through exams, spring breaks and the games. And still leave you enough money to have some fun. So stop by McDonald's for your next meal or snack. We can go through college together.
