by Mark Y. Herring (Dean of Library Services, Dacus Library, Winthrop University) <herringm@winthrop.edu>

Is it possible to say something positive about Internet filtering in libraries and not have everyone, including your mother, call you a wild-eyed,hidebound,neo-Nazi bashi-bazouk? No, of course not, but I'm going to try anyway.

Our story begins in the late 1930s, when the American Library Association, working hand-in-glove with the American Civil Liberties Union, issued its Library Bill of Rights. In a word, the document said everyone had the right to read and no one, of course, disagreed with this. The innocuous document served well enough over the coming years because everyone remained aground and sensible about what reading is, and what constituted this right. But nestled in its midst, the document also heralded ALA's embrace of an absolutist view of the First Amendment, one shared by the ACLU and many others. The right to read came to mean, in absolutist terms, we must select everything for fear of censoring anything. No one really did this but the ideal could not be easily gainsaid, except at the operational level, a minor, devils detail.

Unfortunately, bad enough is seldom left alone. Later, during the turbulent sixties and early seventies, ALA issued its Intellectual Freedom Manual (hereinafter IFM). By now nearly everyone was activist-minded and IFM (and ALA) proved no exception. The IFM spelled out this right to read by adding prohibitions to its provisions: librarians should not sequester what they considered to be adult materials because this flew in the face of the absolutist view. Further, there were to be no adult shelves so labeled because this, too, smacked of the faintest hint of restriction.

All of this came under the guise of preventing our libraries from becoming bare, ruin'd choirs but there was more madness than method. Children, under this absolutist view, had as much right to the Joy of Sex as anyone, and librarians were not to act in loco parentis. Fast-forward to 2004 and it comes as no surprise that ALA has joined forces with the ACLU once more to issue a clarion call against Internet filtering and the protection of pornography in the nations libraries.

What is curious about all this, however, is ALA's duplicity. ALA spokespersons dismiss, dismissively, the argument that young people would ever surf for porn. In an astounding admission of self-delusion, Leonard Kniffel, editor of ALA's official publication for librarians, American Libraries, wrote, "Kids don't have time to sit at library computers and troll for smut, nor do they wish to." (And the former President did not have sexual relations with that woman, Monica Lewinsky, either.)

Further duplicity abounds. Librarians censor daily, or rather restrict in such a way that the end result is as if censoring had taken place: this book is too expensive; that database is too narrow; this CD-ROM is too general. Moreover, while filtering merely removed the chance that John Doe can surf for porn at the library's expense (he can still go home and surf until his heart's content, or until his wife gongs him with an iron skillet, whichever comes first). On the other hand, when library A chooses not to buy database B (probably owing to expense) it's that unlikely that any individual can or will.

If truth be told, we even do a bit of the ideological censoring. For example, you'll find many treatises by the John Birch Society in our nation's libraries; nor will you find much of the KKK's hate-mongering. Neither will you find much, if any, in the way of anti-gay or anti-lesbian materials. When we librarians remove or omit materials, we call it selection. When the little, blue-haired old lady, toting a purse the size of a sailcar wanted to take from the library Madonna's book titled Sex, we excori- ate it as censorship.

It's not that the material substance of the absolutist views of the First Amendment arguments is disagreeable; it's the casuistry behind it that wreaks of ef-flavia. What distinguishes us from animals is our ability to make fine distinctions. We do not, for example, call a monkey with a paintbrush, Picasso; his work may look like modern art, but we think we see a difference. Most people understand that while you may go native in your living room, you cannot do that at the local Wal-Mart. Or rather, you may, but only until the police arrive.

What puzzles me is that we cannot seem to make these same distinctions when it comes to pornography in the library. If one bare-bottomed shot is filtered, so goes the ALA argument, well, then there goes the intellectual neighborhood. In essence, librarians have been reduced to saying all words or pictures on a page or monitor are the same. All are potential information. The argument is akin to saying we should never arrest anyone for fear of arresting an innocent person. Yet, we know that words hurt, that ideas have consequences, and we know that pornographic materials, whether soft- or hard-core, whether glossy or flat color, high or low resolution, are bad for people. Report after report teaches us that Tom Schiro, Ted Bundy and thousands of others have confirmed it; and, the nearly three in five men addicted to some form of it underscore how late the hour is. We know that vice, seen too often, familiar with its face, is something we first endure, then fondle, then embrace. This may not seem very open-minded to some people, but then, as Flannery O'Connor pointed out, some people are so open-minded their brains have fallen out.
