THE LANTERN FOR 1906

MINERS KILLED IN EXPLOSION.

The explosion at the Coaldale mine took place on Tuesday morning, January 9th. The explosion was reported to have been caused by a mine rat entering the main shaft and igniting the coal dust. The explosion killed at least 30 miners, including the owner of the mine. The mine is owned by the Atlantic and Pacific Coal Company, and is located in the mountains of West Virginia. The company has been under investigation by the state mine safety board for several months due to repeated accidents.

THE WOMAN'S HOME COMPANION

This week's issue of The Woman's Home Companion is available for purchase in our bookstore. The magazine features articles on fashion, cooking, and home decor. For a limited time, we are offering a 10% discount on all subscriptions. Please visit our store to learn more.

OTHER COMBINATIONS

Many faculty members have been working on a new edition of the school newspaper, The Lantern. The newspaper will be published bi-weekly and will feature articles on local events, sports news, and student essays. The first issue of the new edition will be available in two weeks.

A FARMERS' PAPER

We have arranged to offer free copies of The Lantern, a bi-weekly Farmers' newspaper, to farmers in the area. The newspaper will feature articles on farming techniques, market trends, and agricultural news. The first issue of the newspaper will be available in two weeks.

A Happy New Year

We wish all our readers a happy and prosperous New Year. May this year bring you health, wealth, and happiness. Please visit our store to purchase your subscription to The Lantern for 1906.

A GREETING

We would like to extend our sincerest greetings to all our readers. May this year bring you joy and happiness. Please visit our store to purchase your subscription to The Lantern for 1906.
JOSEPH WYLIE & CO.

The farmers' bone.

It is a pleasure to you or any one of the many farmers who grow cotton, as the bone is the fertilizier. Farmers' Bone is the fertilizer.

The Cotton Farmers.

There is a tendency among some of the southern farmers to adopt the practice of using bone meal in their fields. The bone meal has been used extensively on the northern farms for many years and is now being introduced into the southern States. It is a good fertilizer and has been shown to be of great benefit in the cultivation of cotton.

The bone meal is rich in phosphates and potash, and is an excellent source of nitrogen. It is also a good source of lime and calcium. The bone meal is prepared by grinding down the bones of animals, and is then mixed with the soil in the fields. It is usually used in quantities of one or two tons per acre.

The bone meal is an excellent fertilizer and is widely used in the northern States. It is also used in the southern States, although to a lesser extent. The bone meal is a good source of nitrogen, and is also a good source of phosphates and potash. It is also a good source of lime and calcium. It is usually used in quantities of one or two tons per acre.
