While thumb marks as a means of identification have been in use in England for several hundred years, it is only recently that they have been employed on a large scale for the purpose of verifying the signature on instruments of writing. The system is being investigated by the Union Bank of Chicago, as a substitute for the thumb mark. The thrum mark is required for payment of several months ago. When the employee's thrum mark is required, it is impossible to alter the signature of the depositor who cannot write. An impression on the thumb mark is made by pressing the thumb firmly upon a card or piece of paper. The impression thus made is of the same size and shape as the thumb mark. The thumb mark is kept on file at the bank, and when the depositor wishes to cash a check, his impression is placed alongside the one on file. The system has been found to be highly satisfactory, as it has prevented thousands of loss from check forgeries. The large inn manufacturing companies have also made use of the thrum mark system. In most cases, the thrum mark is kept on file at the bank, and when the depositor wishes to cash a check, his impression is placed alongside the one on file. FALL 1906

I will be in the North for the next twelve or fifteen days, making the most of the weather. I will be in the mountains, where the air is fresh and the scenery is beautiful. I will be in the cities, where the culture is rich and the art is exquisite. I will be in the countryside, where the pace is slow and the people are friendly. I will be in the woods, where the trees are tall and the birds are singing. I will be in the sea, where the waves are crashing and the colors are bright.

A common
mistaken idea

When you think of a roof covered with iron, the first thing that comes to your mind is that it has everlasting qualities for strength and durability. But did you ever stop to think how easily it will rust, and then that rust holes in it and your roofing is gone. Ruberoid Roofing doesn't rust—never leaks—easily put on lasts longer than iron or shingles, costs less you save money on putting it on—you save money on the actual cost.
