NOW IS THE TIME TO SOW CELERY SEED

NOW is the time to sow celery seed. It is best to sow it in the fall or early spring. Celery is a biennial plant, meaning it takes two years to mature. During the first year, the plant develops a strong root system and leaves. In the second year, it produces flowers and seeds. Celery prefers cool conditions and grows best in well-drained soil. It is often grown as a fall crop to be harvested in the spring. Sow the seeds in rows, about 1 inch deep, and thin them to about 3 inches apart. Keep the soil moist and provide regular watering to ensure the best growth. Celery is a great addition to salads, soups, and other dishes.
