Watch A Home Roll.

An exchange, whose question has been vexing to many, has recently been answered by a leading druggist in a northern city. The question was: Is it true that fish, when thrown on land, will die within a few minutes? The answer is: Yes, in nearly every case. The reason is, that the fish is unable to function properly when out of water. The skin, which is a respiratory organ in water, ceases to function as such on land, and the fish dies from suffocation. The exchange goes on to say, "This is a fact that should be kept in mind when handling fish, as it will prevent unnecessary suffering and waste of life."
